

# SCAN MACHINES

The ultimate measurement  
solution for cylindrical parts

 **SWISS  
MADE**

**Easy to use**

**Super fast**

**Very quick ROI**

# General features

## APPLICATIONS

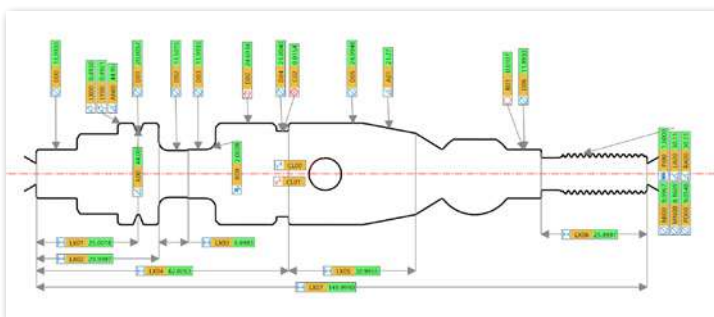

Our range of SYLVAC machines are designed to measure round parts with diameters up to 145 mm and up to 1'280 mm long. Most cylindrical parts, such as aerospace and automotive shafts and components, connectors, dental screws and implants, hydraulics parts, metal packaging for food and cosmetics, rollers, turbines parts, CNC turned parts, etc. can be measured in a few seconds. Various thread types and features can be measured and analyzed with our machines.

Workpiece      Shadow image

The contour of the workpiece is reproduced on the software and all the various elements shown can be measured in static (without part rotation) or in dynamic (with part rotation) when geometrical features such as run-out or concentricity must be measured.

## MEASURING PRINCIPLE

All Sylvac-Scan machines incorporate high resolution line-scan cameras. Using the green LED illuminator to project a collimated beam of light across the part, the part is scanned at speeds up to 100mm/s, whilst the contour of the part is collected through the high precision bi-telecentric lens system and the projected image is detected and processed using the latest line-scan camera technology.

# Increase efficiency

One click measurement

-  Reduce inspection time
-  Reduce scrap
-  Increase productivity

-  Easy to use
-  Save money
-  Quick ROI

-  Increase efficiency
-  Reduce CNC downtime
-  Avoid QC bottle necks

# Optical machines

## SYLVAC SCAN

Optical machine specially designed for workshop measurement close to the machine-tool.

Suitable for first-off part, control in process (SPC), sampling or 100% inspection, our Sylvac SCAN machines are set to revolutionize the control in workshop.

## SHOP HARDENED

Sylvac SCAN machines are Swiss made, quality, robust, precision measuring machines designed to work in even the harshest workshop environments. Our machines come with built in calibration masters which are used to keep the machines accuracy and performance within the required specification, compensating for temperature variations.

The S25/F60/S145 ranges, comes with the added value of temperature sensors, used to detect temperature variation and trigger an automatic calibration, which only takes a short moment. Ensuring the highest precision at all times.

### CALIBRATION MASTER

**ONE CLICK  
MEASUREMENT**

**REFLEX-CLICK :**  
THE MEASURING SYSTEM THAT MAKES  
EVERYONE AN EXPERT !

# Operating principle

## SYLVAC-REFLEX SCAN

The SYLVAC-SCAN's are equipped with Reflex SCAN software. These make them robust and easy to use, allowing perfect integration in workshops. Adjacent to operators, it advantageously replaces conventional measuring systems including multi-gauging thanks to unsurpassed flexibility and time saving.

### «Reflex-Click technology» for one-click measurement !

The cutting edge REFLEX-Click mode measures your parts with a simple click.

## PROGRAMMING MADE EASY

1

Place part

2

Push the start button

3

Part profile is scanned in just a few seconds

4

Main features automatically measured. Edit and save program for repeat work.

These four operations only take a few minutes.

### MEASUREMENT MADE EASY

Step 1: load the part, Step 2: push the button!

The part will be automatically recognised and measured by the machine, displaying classified results in just a few seconds.

*Intelligent automatic part recognition*

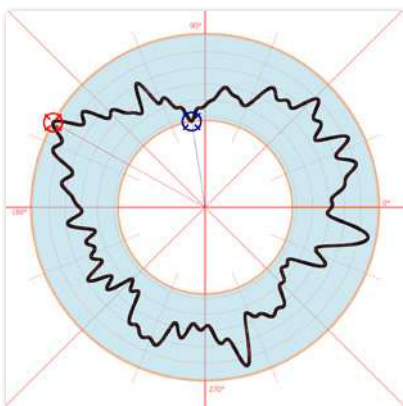

### BARCODE READER

Optionally a barcode reader can be used to instantly recall part programs.

### FLEXIBLE REPORT EDITOR

A flexible report editor is also available, enabling you to customize the presentation of your measuring reports by adding information through a drag & drop method.

### MEASUREMENT ANALYSIS

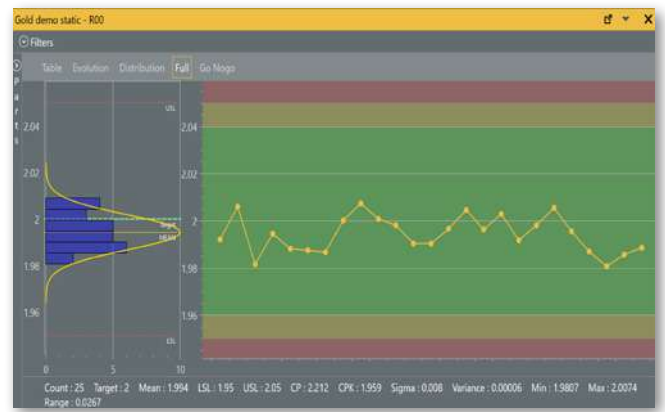

Once the part is scanned and measured, it is possible to review the scanned data in the measurement analysis window. Allowing the operator to make a visual check of the part in precise detail, whether it is a root radius on a thread or a form measurement of a diameter.

## DATA EXPORT AND STATISTICS

The main statistical calculations are included as a standard feature in our RS+ software, along with a statistical view.

Results data can be exported in a variety of formats such as CSV, XML for the purpose of archiving and traceability. Or can be exported as specific formats directly into 3rd party SPC software.

Optionally you can take advantage of the Data Monitoring included with RS+ 'PRO' level software, facilitating live and historical result trends, evolution and distribution charts, statistics such as, CP/CPK, sigma, range and variance.

## INTEGRATED MEASUREMENT

For additional measurements not covered by our SCAN machine, such as an internal diameter, Sylvac can provide a selection of instrument, such as calipers, indicators and internal micrometers.

These Sylvac instruments can be linked to the SCAN machine via our renowned *Bluetooth®* technology, providing a complete part measurement all in one report and sequence.

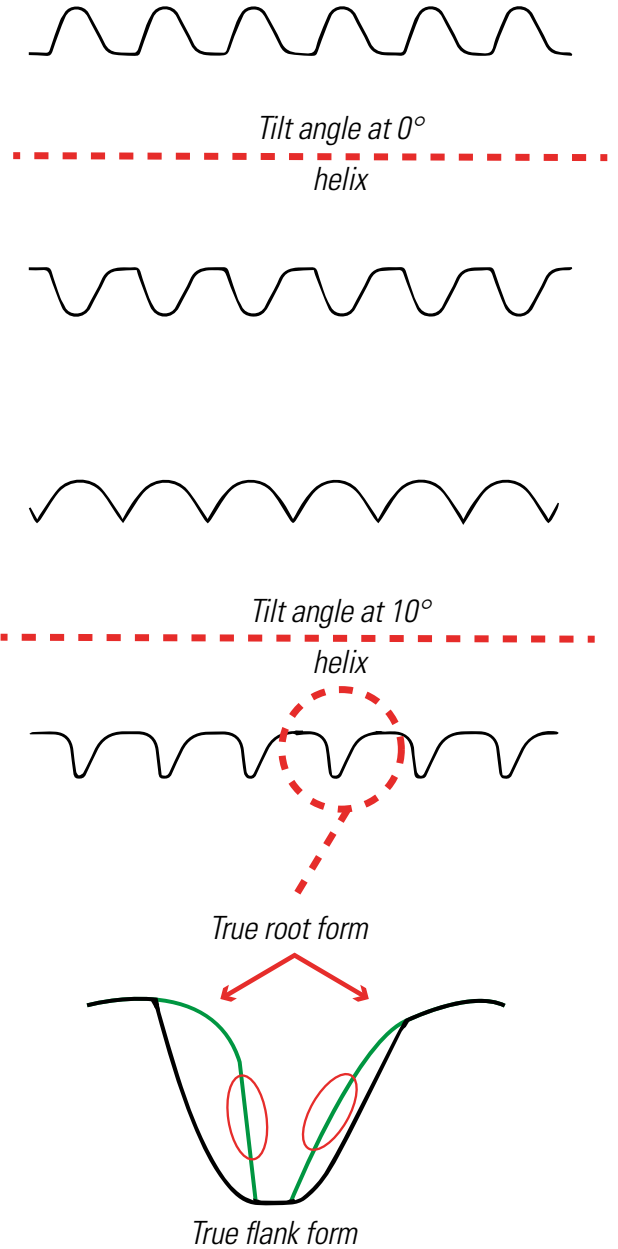

# Exclusive Tilt system

## FOR MORE COMPREHENSIVE THREAD MEASUREMENTS

The Sylvac-Scan machines equipped with the additional tilt 'T' axis (S25T/F60T/F60LT) offer the ultimate measurement solution for threaded parts.

Thanks to our unique tilting optics, the thread can be scanned according to the helix angle, revealing elements of the thread which would otherwise be hidden. Sylvac-Scan offers true thread measurement.

## TYPICAL MEASUREMENT REQUIREMENTS:

- Major diameter
- Minor diameter
- Pitch
- Pitch diameter
- Flank angles
- Root & Crest radius
- Taper angle
- Circularity
- Run-out
- Concentricity

Axis inclinaison on F60T

# Software features

**CAD Software**

**CAD import/export**

**Advanced thread measurement**

**Advanced dust filtering**

**Access management- security level**

**Customisable operator interface**

**Formula wizard**

**Script function**

**BT Connectivity to Sylvac instruments**

**Easy to read results**

**Data export**

**Statistic view**

**Reports editor**

**Off-line programming**

**Automatic part/program recognition**

**Easy to use**

**Automatic measurement of the main features**

**One-click measurement**

At the cutting-edge  
of technology

# Sylvac SCAN S25 & S25T

- Bench top machine for smaller parts
- Integrated operator touch screen control panel
- Integrated calibration master & temperature sensors for environmental control
- Quick and easy accessory changing system
- High definition optics suited to micro parts
- Reflex click technology
- Tilt axis for advanced thread measurement
- Advanced software features
- Fully equipped «Automation Ready»
- Motorised tailstock
- High resolution sensor for intricate features

## TECHNICAL SPECIFICATIONS

		902.4020 - SCAN S25		902.4025 - SCAN S25T	
		Diameter	Length	Diameter	Length
Measuring range	mm	26	200	26	200

# Sylvac SCAN F60(T) & F60L(T)

- Capable mid size machine for general and complex parts
- Single pass rapid scan 100mm/s
- Quick release tooling
- Large LED status light
- Safety light curtain
- Integrated calibration master & temperature sensors for environmental control
- Reflex click technology
- Tilt axis for advanced thread measurement
- Advanced software features
- Optional custom scripts
- Dust filtering for part contamination

# Investment

## SYLVAC SCAN MACHINES QUICK ROI

Because the return on investment is essential data to make sensible decisions, SYLVAC can help you calculate your estimated payback time. It will directly depend on the profile of your company and the expected use of the machine.

You can see for yourself that your return on investment will be less than than 6 months in most cases. Moreover, the quality of your measurements will be improved!

## TRADITIONAL MANUAL METHODS USING MULTIPLE GAUGES :

**10-30 min**  
INSPECTION TIME

## SYLVAC-SCAN SERIES :

**30-60 sec**  
INSPECTION TIME

# Tailor-made solutions

## CLAMPING SOLUTIONS

Apart from our standard range of fixtures, customised solutions can be developed to optimise your measuring process.

## SOFTWARE

Thanks to the Reflex SCAN+ and its flexible open script option, custom software features and macros can be created.

Example of SCAN F60 with robot

Example of SCAN S25T with robot

# MEASURING TURNED PARTS HAS NEVER BEEN SO EASY !

- Quality control for your shafts just got easier !
- The Sylvac-Scan range of optical measuring centres, now available fully automated
- Rapid automatic part loading/unloading by a robot, classification feedback for specified drop location
- Machine tool feedback for part correction / offsets
